THE HAMMERHEAD

FoxFury's new HammerHead Search flashlight allows users to change from one strong CREE XR-E white LED to 12 UV LEDs. The white LED alone supplies up to 160 lumens. Its UV mode is used in conjunction with a pair of orange goggles (sold separately). The HammerHead Search is constructed of lightweight aluminum and is waterproof and fire resistant. Three CR123 batteries provide up to eight hours of life. MSRP: \$294.99

A NEW THERMAL IMAGER

Bullard's new TacSight S2 incorporates an upgraded amorphous silicon engine for improved image clarity and picture definition. The company's optional Electronic Threat Tagging tool enables the operator to tag heat sources in blue for improved visibility and tracking. Other optional accessories include a fully integrated wireless transmitter, a receiver package for monitoring and recording, an attachable monocular eyepiece and a palm-

top/handheld receiver for remote monitoring.

HIGH-INTENSITY BLAST

Laser Devices' new BLAST 2 system provides pinpoint accuracy and exceptional illumination for low-light encounters. This compact system can be configured with either a visible or infrared laser and a 95-lumen incandescent lamp or a 150 lumen high intensity LED. A variety of mounting options are available to accommodate large selection of military and law enforcement firearms. Users can easily remove the original toggle lever switch tail cap located on the rear of the BLAST2 housing and replace it with a tail cap features a pressure pad switch.

GUN-MOUNTED LED

Insight's new hand-held, weapon-mountable H1X

Proxima flashlight is a simplified, multi-function tactical LED flashlight

with a one-handed tail switch that provides constant, momentary, strobe and dimming modes. A crumpled bezel and tail cap enhance tactical force-options. Other features include a shockproof, high-intensity LED with 80-lumen output; anodized aluminum construction; a precision-focused, machined aluminum reflector; and a run time of 90 minutes on high, or 100 hours on low. The H1X is waterproof, measures 4.2" long x 1.3" bezel x 1" body, and weighs 5 oz.

NIGHT VISION WITH GAIN CONTROL

The Night Vision Depot Binocular Night Vision Device with Gain Control (BNVD-G) is a dual-tube night vision goggle for depth perception and is enhanced with Gain Control. Each eyepiece has its own knob to allow the user to lower the tube gain (i.e., brightness) for overly bright conditions or to increase the gain under extreme dark conditions.

NIGHT-VISION RIFLESCOPE

American Technologies Network's new MARS 4X-3P night-vision weapon sight features third generation ITT Pinnacle Image Intensifier tubes that perform in high-light or light-polluted areas (such as urban environments), while minimizing any halo effects. The sight provides 4X magnification with multi-coated all-glass optics with a mil-dot reticle, is nitrogen-purged for internal fogging resistance and features an automatic brightness control. Additional features include a low-battery indicator, a digital remote control and a daytime cover with an infrared filter all packed in a mil-spec hard case with batteries (it accepts either one 3V CR123A lithium or one AA battery), a user guide, mounting hardware, and an instructional video.
